**Written Report Format:** A written report is produced as documentation of all evaluative services, unless otherwise discussed and agreed upon by client and clinician. Dependent upon reason for referral, intended use for report, and/or personal preference, one of two formats for the written report may be selected. The components typically included in each are listed below for reference; however, reports may vary based on the type of evaluation and case-by-case circumstances. The clinician reserves the right to clinical judgment in determining structure and content of information included in the written report. Clients should consult directly with the clinician at outset of services to determine most appropriate format.

- The basic written report provides a brief summary of background information, review of findings, and basic recommendations. Descriptions of instruments administered and if applicable, tables of scores are provided in an appendix.
